OUTLINE

- 1. Interventions more definitive evidence?
- 2. Interventions on the horizon?
- 3. Implementation advances?

Causes of death in the neonatal period for 193 countries (2000-2008)

	Cause of death	2000	2004	2008
1	Infection Sepsis Pneumonia	1.04 (26%)	0.94 (25%)	0.89 (25%) 0.54 0.36
	Diarrhoea	0.11 (3%)	0.07 (2%)	0.07 (2%)
-	Tetanus	0.26 (6%)	0.10 (3%)	0.07 (2%)
	Preterm	1.12 (28%)	1.23 (33%)	1.04 (29%)
	"Asphyxia"	0.91(23%)	0.91 (24%)	0.83 (23%)
	Congenital	0.30 (7%)	0.31 (8%)	0.29 (8%)
	Other	0.26 (6%)	0.19 (5%)	0.39 (11%)
	Total	4.0 million	3.8 million	3.6 million

1. Interventions – more definitive evidence?

Kangaroo Mother Care Definition of the intervention

What?

- Continuous Kangaroo Mother Care is when baby is tied skin to skin with mother 24 hours a day for days/weeks
- Provides thermal care, increased breastfeeding, reduced infections and also identification and links to additional supportive care, if needed

Who?

- Babies <2000g birth weight (as marker of preterm birth approx <34 weeks
- Babies who are stable (eg not requiring recurrent resuscitation)

Previous systematic reviews have not shown a significant mortality benefit of KMC

Analysis 01.01. Comparison 01 Kangaroo mother care versus conventional neonatal care, Outcome 01

Mortality

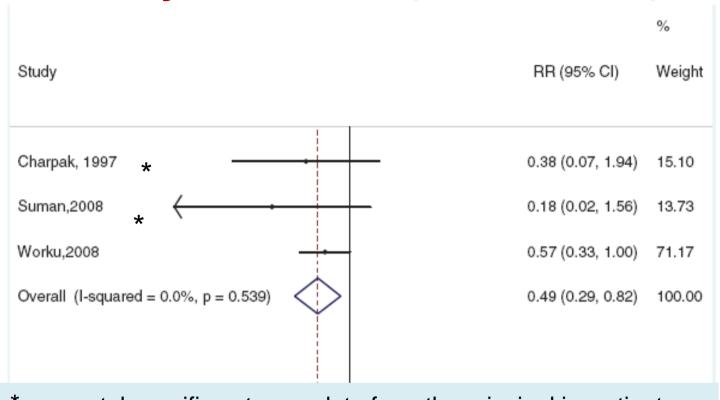

Review. Kangaroo mother care to reduce morbidity and mortality in low birthweight infants Comparison: 01 Kangaroo mother care versus conventional neonatal care

Study	Treatment n/N	Control n/N	Relative Risk (Fixed) 95% CI	Weight (%)	Relative Risk (Fixed) 95% CI
		11/14	7576 CI	(%)	7576 CI
01 At 41 weeks' correcte			_		
Charpak 1997	6/364	10/345		100,0	0.57 [0.21, 1.55]

Cochrane review 2003, Conde-Agudelo A et al

Non significant mortality result – small numbers, mixed mortality outcomes, some studies did not allow KMC in first week of life New RCTs with neonatal mortality outcomes

Meta-analysis of effect on neonatal mortality of facility-based KMC (3 RCTs, N 1075)

^{*} neonatal specific outcome data from the principal investigator.

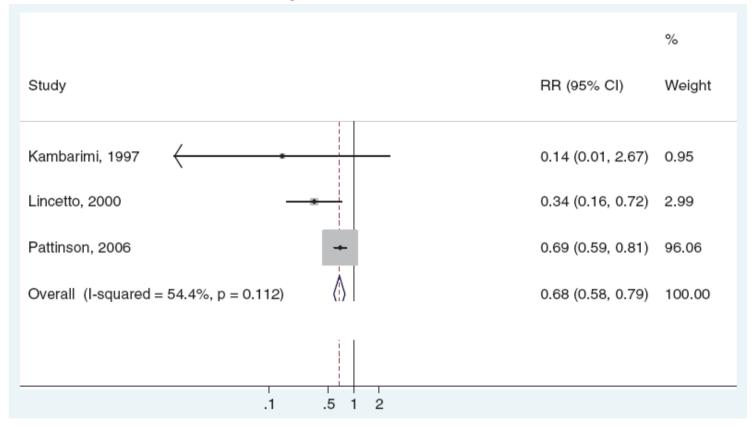

Source: Lawn et al (2010) 'Kangaroo mother care' to prevent neonatal deaths due to preterm birth complications. Int J Epidemiol: i1-i10.

RR 0.49 (0.29, 0.82)

51% reduction in neonatal mortality for neonates <2000 g with facility-based KMC compared to conventional care

Meta-analysis on neonatal mortality of facility based KMC effect (3 observational studies, 17,961)

Source: Lawn et al (2010) 'Kangaroo mother care' to prevent neonatal deaths due to preterm birth complications. Int J Epidemiol: i1–i10.

RR 0.68 (0.58, 0.79)

34% reduction in neonatal mortality for neonates <2000 g with facility-based KMC compared to conventional care Major effect possible at scale

But, knowledge ≠ implementation

Government tells mothers to use charcoal stoves as incubators

RISDEL KASASIRA PARLIAMENT

INADEQUATE incubation services for premature babies in the ... Premature births in Uganda country have forced the government to adopt use of charcoal stoves commonly known as sigili as an alternative source of

provide temperatures like those of a mother's womb. So where wondon't have incubators, mothers enn use skrift."

'are common in rural areas where pregnant mothers are exposed to diseases like malaria. Dy Ronald Muheirwe of Star.

the governme deliver services

Ngora Count a medical docto said exposing premature babies to charcoal stove heat is dangerous because the heat is hard to regulate. This is a crude and desperate ma

African newspaper headline August 2007

As yet no coverage data for KMC – possible through household surveys and urgent need to track rapid scale up

Cause of death 2
INTRAPARTUM
RELATED
("birth
asphyxia")

Resuscitation of babies who do not breathe at birth

<1 million babies

<1% need advanced resuscitation

Approx 6 million babies

Approx 3-6% of babies require basic resuscitation (bag-and-mask ventilation)

Approx 10 million babies

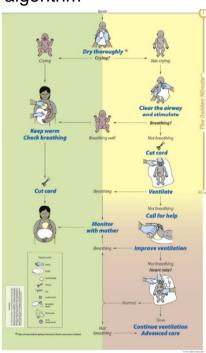

Approx 5-10%
of babies require simple stimulation at birth to help them breathe (drying and rubbing)

136 million babies born

All babies require immediate assessment at band simple newborn care

(assess breathing, dry, and put the baby skin-to-skin with

Helping Babies Breathe algorithm

Ref: Wall S et al, IJGO 2009

Neonatal resuscitation – First breath 6 country study

Comparison design	Intervention	Results
Before and after	WHO Essential Newborn Care package which includes basic newborn resuscitation	Stillbirth 0.69 (0.54 - 0.88)
(N>50,000 births)	Tiewboiii resuscitation	Early neonatal 0.99 (0.81-1.22)
Cluster RCT (N > 60,000 births)	Additional effect of specific training in basic resuscitation	Stillbirth 1.05 (0.84 - 1.13) Early neonatal 0.87 (0.65 - 1.16)

Major media coverage and major program confusion!

Messages such as resuscitation has no effect except on stillbirths..

Meta-analysis of neonatal resuscitation training on "birth asphyxia" specific neonatal mortality (3 observational studies)

Forest plot removed for web version

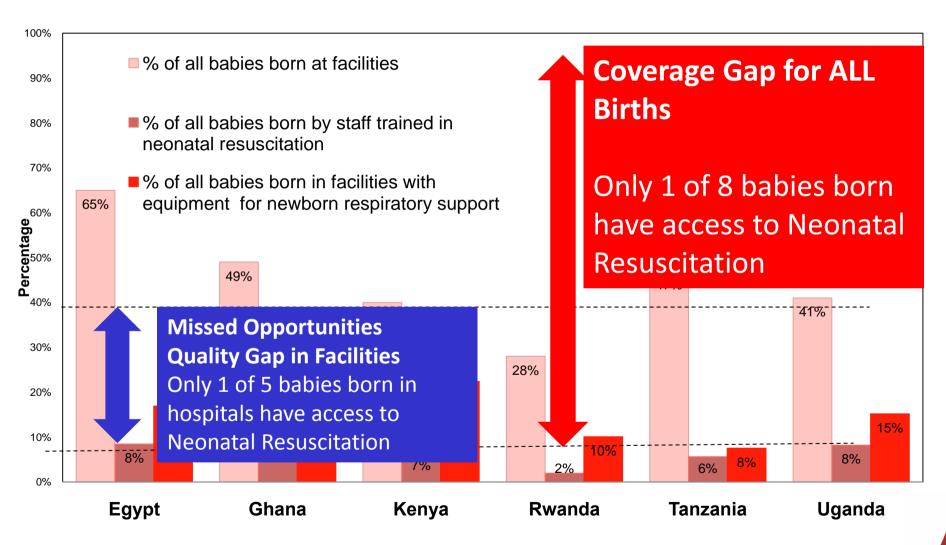

Anne CC Lee for the LiST neonatal resuscitation group - DO NOT CITE

RR 0.70 (0.58, 0.79)

30% reduction in neonatal deaths due to "birth asphyxia" with before-after studies of facility-based resuscitation training

Coverage gap for resuscitation

Data source: National Service Provision Assessment Surveys, years ranging 2002-2006

Source: Wall S et al, IJGO 200

Cause of death 3
NEONATAL
INFECTIONS

Chlorhexidine umbilical cord cleansing

Intervention

Application 4% chlorhexidine on umbilical cord

May be multiple applications – more effective if early (first 24 hours)

Potential to include chlorhexidine in mother-held clean birth kits

Mortality trials (all cluster RCTs)

- 1. Nepal (2002-2006) Mullany et al
- 2. Bangladesh (2007-2009) El Aruifeen et al
- 3. Pakistan Sindh province 9741 births
 TBAs handwashing and/or chlorhexidine wipes
 Factoral design (outcome all cause neonatal mortality)
 - Handwashing vs none no significant neonatal mortality effect
 - Any chlorhexidine vs non 0.62(0.45-0.86)

New trials

Zambia and Zanzibar (2010-2014)

Meta-analysis of effect on neonatal mortality of chlorhexidine umbilical cord cleansing (3 RCTs)

Forest plot removed for web version

Cord Chlorhexidine Working Group - DO NOT CITE OR PASS ON

RR 0.77 (0.64, 0.93)

23% reduction in all cause neonatal deaths
Higher reduction for infection deaths

2. Interventions – on the horizon

On the horizon.....

New technologies

Birth simulator to improve skills for care at birth (Laerdal Foundation)

Wind up powered robust technology

- Doppler fetal heart rate monitor
- Pulse oximeter

Cell phone technology for referral and for tracking

Bubble CPAP ventilator

Neonatal sepsis biomarkers and testing

PROLIFERATING KITS !!

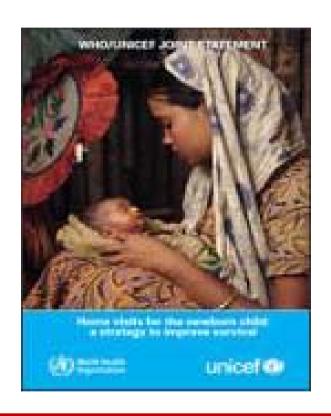

3. Implementation advances

Joint WHO and UNICEF statement on postnatal visits

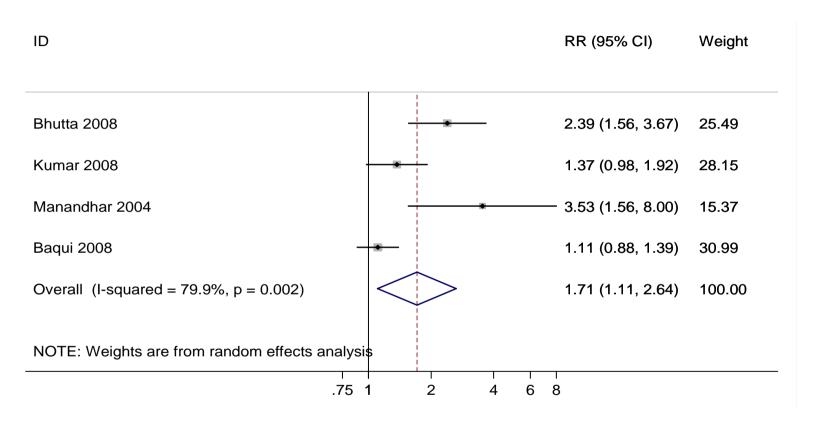

Launched since last Countdown – recognizes strong evidence base for early postnatal care..

Community based packages

Approach	Number of cRCTs or quasi experimental	NMR baseline (per 1000 births)	Effect on neonatal mortality rate
Women's groups	3 (Azad 2010, Manandhar 2004, Tripathy 2010)	30 - 54	Non sig to 32%
Home visits – preventive and linkages	3 (Bhutta 2008, Kumar 2008, Baqui (India) 2009)	35 – 84	Non sig to 50%
Home visits with community-based curative care	2 (Bang 1999, Baqui 2008)	47 - 62	34 to 62%

Context, content of care, coverage
Confusing cost analysis.. US\$95 TO \$3442 per life saved
FURTHER GROUP ANALYSIS IN PROGRESS
NEW TRIALS IN PROGRESS IN AFRICA

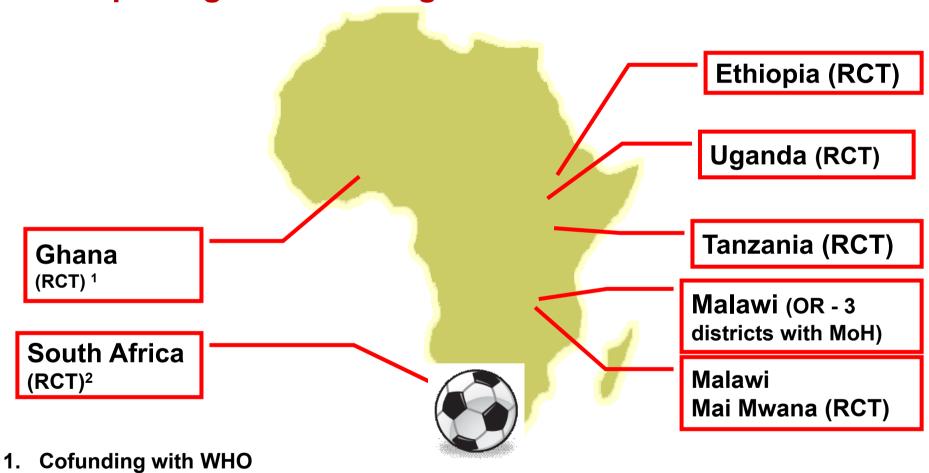

Meta-analysis of effect on facility birth of community mobilisation (3 cRCTs)

Lee CC et al IJGO 2009

71% increase in facility births across all studies 210% increase for more intensive home visit approaches Reduction in early NMR (RR 0.64 (0.48, 0.85))

African Newborn Network Adapting and testing community-based, integrated packages addressing newborn health in Africa

Comparable results for effect and cost – some by time of next Countdown meeting

Conclusion

New for newborns!

1. Interventions – more definitive evidence?

- Kangaroo mother care
- (Antenatal steroids)
- Basic neonatal resuscitation
- Chlorhexidine cord cleansing

2. Interventions – on the horizon?

- More technologies will be critical to evaluate
- Kitting!

3. Implementation advances?

- Postnatal care
- Community based care linked to facilities
- More on context, content of packages
